

803-1 V-Block Kit

Adapts to our Invar System

If you use our Invar System as a scale extension tool, you may need the **803-1** V-block kit. These V-blocks work with our Invar System to provide quick access to shafts from 1-1/2" to 48" in diameter. A spring-loaded steel mounting rod ensures positive contact with the shaft below. The length of the rod is not manufactured to a precision length but is meant for relative "X" or "Y" measurements on rolls. The 803-1 is a kit consisting of both V-blocks, but each V-block may also be purchased individually (see table below). You can see other Invar System Components on our website.

Model	Description	Fits
803-1	803-2 & 803-3 V-blocks with case	1-1/2" - 48" dia. rolls (38mm - 1.2m)
803-2	120° V-block with case	1-1/2" - 15" dia. rolls (38mm - 38cm)
803-3	160° V-block with case	12" - 48" dia. rolls (30cm - 1.2m)

Specifications

Threads: Top of mounting rod has internal 3/8" x 24 threads, fits Brunson Invar System. Supplied with two Invar system connectors.

Weight (approx): Kit, 2 lbs.; Kit and case, 3 lbs; Shipping, 4 lbs.

May be used with...

- Brunson Invar System tubes
- Any optical tooling scale except 6040 or 6040M
